ABSTRACT OF THE DISCLOSURE

Disclosed is a method for managing extended neighbor cells of a mobile terminal designed to save power of a battery as well as search time at a visited location. The method 5 is characterized by the steps of collecting information on cells which belong to neighboring different PLMN (Public Land Mobile Network) other than the PLMN to which a serving cell, which the mobile terminal is assigned to belongs, and of performing rescanning of HPLMN using the information on cells.
